

This vapor-suppression product is designed for use by fire departments, port authorities, sewer treatment plants, industry and municipalities to reduce the fire hazard associated with flammable liquid spills.

This surface active agent emulsifies fuels and hydrocarbons with water. Fire hazard is significantly reduced by the resulting suppression of any flammable or combustible vapors.

This formula contains no alcohol, solvents or petroleum distillates.

DIRECTIONS

This vapor suppression chemical must be applied to the spill with sufficient agitation to break up the slick. Agitation may be by mechanical means or by the action of the hose stream.

To emulsify small spills, apply directly to the spill area with a hand sprayer then flush thoroughly with water.

For larger spills on water, inject this vapor suppression chemical into hose stream with standard eductor equipment. Dilution rate should be between 1 - 3%. Do not use with a foam nozzle.

WARNING: This product will not disperse vapors accumulated in any closed areas. Take all precautions necessary to prevent hazard from vapor accumulations.

NOTE: This product will not make spills non-hazardous. Do not flush to drains leading to sanitary or storm sewers. Please consult local environmental authorities for proper disposal.

Spills of fuel or other hazardous materials must be reported to the proper authorities, as prescribed by applicable state and Federal laws and regulations.

NO-MORE-VAPOR

EMULSIFIES AND DISPERSES
FUELS, SOLVENTS AND OILS

ELIMINATES
FLAMMABLE OR EXPLOSIVE
VAPORS

CAUTION

May irritate eyes. Avoid contact with eyes.
See back panel for further precautions
and first aid instructions.
